

Name of Chemical : Potassium Titanate

Potassium Titanate is specially designed for welding rod application and other abrasives like brake pads. His material has very low levels of phosphorous and sulphur content. This makes it particularly suitable for high quality welding rods. Other applications include brake pad and other abrasive manufacturing.

<i>Characteristics</i>	<i>Requirement</i>
Titanium Dioxide %, min	70
K₂O %	17 – 20
Na₂O %, max	0.05
Sieve residue (325 mesh) %, max	5.0
Sulphur %, max	0.05
Carbon %, max	0.25
Phosphorous	Traces
Moisture, % max	5.0
SiO₂, %, max	1.0
